

String Builder

immutable (can't be updated)

String str = "a";

str = str + "c" \rightarrow "ac"

str = str + "c" \rightarrow "acc" ✓

str = str + "i" \rightarrow "acci"

str = str + "o" \rightarrow "accio"

{ since in Java }

1. In each step we are creating a new string
2. Time Consuming

Memory diagram

all the variables & fun are stored here

str = "I love programming"

✓ str = str + ", and coffee"; TC: O(N)

ArrayList

✓ $arr = \{1, 2, 3, 4\}$

$TC: O(1)$

✓ $arr.add(5);$

• equals()

It check string value
present, instead of add.

AK SK
str == str2

False

```
String str = new String("Hello");  
String str2 = new String("Hello");
```

```
{ string str = "Accio"  
  string str2 = "Accio"
```

Stack

Heap

StringBuilder

- ✓ ↳ append will be $O(1)$
 - ✓ ↳ mutable
- class

✓ `StringBuilder sb = new StringBuilder("Accio");`

Input in Java

Method 1

```
{ Scanner scn = new Scanner(System.in)  
  String str = scn.nextLine();  
  int a = scn.nextInt();
```

Buffer Reader

```
InputStreamReader in = new InputStreamReader(System.in);
```

```
BufferedReader bf = new BufferedReader(in);
```

```
String str = bf.readLine();
```
